Introduction

Congratulations on your purchase of a U-Line refrigerator.

For nearly five decades and three generations, U-Line continues to be the leader in innovation, quality and value in the premium built-in undercounter ice making, refrigeration and wine preservation market. U-Line has captivated those with an appreciation for the finer things with exceptional functionality, style, inspired innovation and attention to even the smallest details. We are known and respected for our unwavering dedication to product design, quality and selection.

In 1962, Henry Uihlein founded U-Line Corporation as an outgrowth of Ben-Hur Freezer Company and was the first to develop and patent an automatic stand-alone undercounter residential ice maker. His foresight and determination to develop new ideas and to succeed when there were no clear guidelines or solutions are evident today. The newest Uihlein generation continues to build upon the family's innovative legacy at the Milwaukee, Wisconsin based business by providing continuity and vision from which new designs and technology continue to be born.

Today the complete U-Line product collection includes Ice Makers, Wine Captain® Models, Combo® Models, a Refrigerator / Freezer, Refrigerators, Drawers and Beverage Centers. The U-Line brand offers products in the 1000 Series, 2000 Series and the Modular 3000 Series. The 1000 Series offers a more targeted priced product with appropriate features, while the 2000 Series offers upscale features, advanced technology and specialized product families. U-Line's approach to its breadth of products, multiple price points and features allows a choice and product that will fit any lifestyle.

Read and save this Use and Care Guide.

IMPORTANT

READ all instructions in this guide completely before using the appliance for the first time.

For future reference, keep this guide in a safe, accessible location. If you need additional information or assistance, please contact U-Line Corporation direct. Contact information appears on the back cover of this guide.

Before Calling Service. If you think your U-Line product is malfunctioning, read the OPERATION section of this guide to understand clearly the function of the control. If the problem persists, read the TROUBLESHOOTING GUIDE section of this guide to help you quickly identify common problems, and provide information on possible causes and remedies.

Please Record Your Model Information

You will need your product model and serial number when you request additional information or services. You can find this information on the serial plate located on the upper right or back wall in the interior of your product. This information also appears on the warranty registration card. Please complete and mail your warranty registration card. You may also register online at www.u-line.com

Please record the model number (1), serial number (2), date of purchase, and dealer contact information for your U-Line product below:

I Safety Precautions

IMPORTANT

- **PLEASE READ** all instructions before installing, operating, or servicing the appliance.
- Proper installation procedures must be followed when completing an installation or relocation of a unit. Consult the installation guide before any installation begins. U-Line contact information appears on the rear cover of this guide.
- This unit requires connection to a dedicated 15 Amp grounded (three-prong), polarized receptacle, installed by a qualified electrician, compliant with applicable electrical codes.

Safety Alert Definitions

Throughout this guide are safety items labeled with a Danger, Warning or Caution based on the risk type:

DANGER

Danger means that failure to follow this safety statement will result in severe personal injury or death.

WARNING

Warning means that failure to follow this safety statement could result in serious personal injury, property or equipment damage.

CAUTION

Caution means that failure to follow this safety statement may result in minor or moderate personal injury, property or equipment damage.

General Precautions

Use this appliance for its intended purpose only. Follow these general precautions with those listed throughout this guide:

DANGER

RISK OF CHILD ENTRAPMENT. Before you throw away your old refrigerator or freezer, take off the doors and leave shelves in place so children may not easily climb inside.

WARNING

SHOCK HAZARD - Electrical Grounding Required.

- Never attempt to repair or perform maintenance on the unit until the electricity has been disconnected.
- Never remove the round grounding prong from the plug and never use a two-prong grounding adaptor.
- Altering, cutting of power cord, removal of power cord, removal of power plug, or direct wiring can cause serious injury, fire and or loss of property and or life, and will void the warranty.
- Never use an extension cord to connect power to the unit.
- Always keep your working area dry.

WARNING

Install provided Anti-Tip kit. Serious personal injury could occur.

CAUTION

- Use care when moving and handling the unit. Use gloves to prevent personal injury from sharp edges.
- If your model requires defrosting, **DO NOT** use an ice pick or other sharp instrument to help speed up defrosting. These instruments can puncture the inner lining or damage the cooling unit. **DO NOT** use any type of heater to defrost. Using a heater to speed up defrosting can cause personal injury and damage to the inner lining.

IMPORTANT

- Do not lift unit by door handle.
- Never install or operate the unit behind closed doors. Be sure front grille is free of obstruction. Obstructing free airflow can cause the unit to malfunction and will void the warranty.
- Failure to clean the condenser every six months can cause the unit to malfunction. This could void the warranty.
- Allow unit temperature to stabilize for 24 hours before use.
- Do not Block any internal Fans

Use only genuine U-Line replacement parts. Imitation parts can damage the unit, affect its operation or performance and may void the warranty.

Ice Makers Feature:

High ice production and storage. ADA151M, BI2115 and BI98 models produce up to 25 pounds of ice per day and store 25 pounds. BI95 and SP18 models produce up to 23 pounds of ice per day and store 12 pounds. Combo® Models produce up to 18 pounds of ice per day and store 13 pounds and provide both ice production and refrigeration in one. CO1175 has 4.2 cubic feet and CO29 has 2.1 cubic feet refrigeration storage.

No drain required. Easy and inexpensive to install. Only requires a 1/4" outside diameter water line.

Conserves on water. Uses under 3 gallons of water to produce 22 pounds of ice or 2-1/4 gallons for 18 pounds.

Built-in or freestanding. Provides custom look when built-in with no additional venting clearance needed on sides, top or rear. Do not obstruct the grille.

Vinyl-clad cabinet. Textured, rich appearance. More resistant to scratching, peeling and flaking.

Door will accept a 1/4" panel. Ability to match surrounding décor and cabinets. Black and white models only.

Integrated handle. Does not add depth to the cabinet when built in. Black and white models only.

Field-reversible doors. Flexible installation options. All models with black and white doors are field-reversible. Stainless steel models must be order right- or left-hand hinged.

Flat recessed grille. Blends with the other models and integrates with surrounding cabinetry.

Defrost Type: Manual Defrost

For indoor use only.

ADA151M Model Features:

Factory installed door locks. Provides security and safety.

Stainless steel models. Offers a bold stainless steel handle, stainless steel wrap door. Stainless steel models must be ordered right or left-hand hinged

Combo® Models Feature:

Mechanical Temperature Control. Provides ability to set the temperature.

Adjustable tempered glass shelves. Sleek, streamlined interior. Allows flexible shelf locations to meet varying food and beverage storage needs. Three in 75, Two in 29.

In-door storage shelves. Two adjustable on 75 model and 3 on 29 model. Easiest access storage area right where you need it. Adjustable to allow flexible storage options

CO1175 and BI2115 Model Feature:

Adjustable leveling legs. Achieve a more precise under counter fit. Durable, strong legs will not bend when unit is installed.

Stainless steel model. Offers a bold stainless steel handle, stainless steel wrap door. BI2115 has full wrap. CO1175 has black "cap" on top and bottom of the door. Stainless steel models must be order right- or left-hand hinged.

BI2115 Model Features:

Optional 3/4" full overlay door panel kit. Provides a fully integrated appearance with surrounding décor while maintaining zero door clearance. Easy to install. Black and white models only. Must order kit number U-OL2115.

Self-closing door. Engages when the door is open 8-10". Ensures a positive door seal and prevents door bounceback.

Contemporary grille design. Integrates seamlessly with surrounding cabinetry.

I Product Operation

Air Flow

IMPORTANT

The unit requires proper air flow to perform at its highest efficiency. Do not block the front grille or internal fans at any time, or the unit will not perform as expected. Do not install the unit behind a door.

Initial Startup

All U-Line controls are preset at the factory. Initial startup requires no adjustments.

IMPORTANT

U-Line recommends allowing the unit to run overnight before loading refrigerator or freezer with product.

IMPORTANT

On ice maker equipped units, it is possible that dirt or scale will dislodge in the water line. Always throw away all ice cubes made during the first two to three hours of operation.

To turn the unit on or off:

Press the rocker switch located below the temperature control dial in the center of the grille(2), inside the door on the front panel, or behind the grille.

Control Dial

Combo Models provide two temperature zones within the cabinet to satisfy the specific storage requirements.

The control dial sets a single continuous temperature. This set-point temperature is a base setting used by the controller to maintain the temperature zone in the unit. The factory default MID setting, number 3 or 4 set-point for Beverage Center and Refrigerator models is 38°F. The factory default set-point Wine

Adjusting Air Temperature

Combo Models

IMPORTANT

- **Adjust the set point temperature in single increments, and wait 24 hours for the temperature to stabilize before rechecking.**
- **Factory recommended set-point is MID setting on dial control.**

To adjust the set point temperature:

Adjust the temperature by turning the numbered dial (1) in small increments.

Adjusting Ice Harvest

BI Models

1. Remove the front grille (see MAINTENANCE).
2. Turn the adjusting screw (3) using a flat tip screwdriver in a small increment clockwise for a **COLDER** setting (slower ice production) or counterclockwise for a **WARMER** setting (faster ice production).
3. Replace the front grille (two screws).

Checking Product Temperature

To check the actual product temperature in the unit.

1. Partially fill a plastic (nonbreakable) bottle with water.
2. Insert an accurate thermometer.
3. Tighten the bottle cap securely.
4. Place the bottle in the desired area for 24 hours.
5. Avoid opening the unit during the testing period.
6. After 24 hours, check the temperature of the water. If required, adjust the temperature control in a small increment (See ADJUSTING TEMPERATURE).

Causes which affect the internal temperatures of the cabinet include:

- Temperature setting.
- Ambient temperature where installed.
- Installation in direct sunlight or near a heat source.
- The number of door openings and the time the door is open.
- The time the internal light is illuminated. (This mainly affects product on the top rack or shelf.)
- The front grille or condenser are obstructed.

6 Ice Maker

Ice Maker Operation

When the ice bucket is full, the ice making mechanism will shut off. However, the refrigeration system will continue to cool and maintain the ice supply. Frost-free ice maker units have lower ice production than manual defrost units.

IMPORTANT

Do not place cans or bottles in the ice compartment because they will freeze.

To turn off ice production: Raise the bin arm into an upright and locked position. The unit will preserve temperature for ice storage.

IMPORTANT

If not intending to use the ice maker turn the water supply valve off, it is important to raise the bin arm of the ice maker (Figure 1). Failure to raise the bin arm may result in damage to the water valve.

Certain sounds are normal during the unit's operation. You may hear the compressor or fan motor, the water valve, or ice dropping into the ice bucket.

⚠ WARNING

NEVER use an ice pick, knife or other sharp instrument to separate cubes. Shake the ice bucket instead.

During periods of limited use or high ambient temperatures, it is common for cubes to fuse together. Gently shake the bucket to break apart cubes. If not using the ice maker regularly, empty the ice bucket periodically to ensure fresh cubes.

It is normal for cubes to appear cloudy. The cause is air trapped in the water because of fast freezing. It is not caused by the health, taste or chemical make up of the water. It is the same air that is in every glass of water you drink.

Remove the ice bucket for emptying and cleaning. To remove the ice bucket, raise the bin arm and remove the bucket from the ice compartment. Use the ice bucket for ice storage only.

Ice Maker Adjustment

Ice Cube Thickness Adjustment. Interval - As Required

On ice maker equipped models, adjust the cube size by changing water amount injected into the ice maker assembly as follows:

1. Remove the ice maker assembly cover (1).
2. Find the adjusting screw on the ice maker assembly control box (2). The adjusting screw is just below the minus (-) and plus (+) signs on the control box.

⚠ CAUTION

Too large of an adjustment to the screw can cause the water to overflow the ice maker and can cause property damage.

3. Turn the adjusting screw toward the minus (-) sign (clockwise) for smaller cubes or toward the plus (+) sign (counterclockwise) for larger cubes.
4. Install the ice maker assembly cover.

Leveling

IMPORTANT

Unit must be level, for proper door and ice maker (if equipped) operation.

For Models with adjustable leveling feet:

1. Use a level to check the levelness of the unit from front to back and from side to side. Place the level along top edge and side edge as shown (1).
2. If the unit is not level, rotate the adjustable leveling legs to raise or lower each corner of the unit as necessary.
3. Check levelness after each adjustment and repeat the previous steps until the unit is level.

For Models without adjustable leveling feet:

IMPORTANT

The unit must be located on a level surface, for proper door and ice maker (if equipped) operation.

Use a level to check the levelness of the unit from front to back and from side to side. Place the level along top edge and side edge as shown (1).

Removing and Installing Interior Shelves

For models equipped with glass shelves having shelf supports, remove the shelves as follows:

1. Open door completely.
2. Grasp the shelf edge in the center and slide the shelf from the unit.

Insert the shelves as follows:

1. Reposition the shelf as required, ensure the raised white edge strip is toward the rear of the unit and graphics, if applied, are on the underside of the shelves.
2. Gently slide the shelf back in to the cabinet at the desired position.

Removing and Installing Grille

WARNING

Disconnect electric power to the unit before removing the grille.

WARNING

DO NOT touch the condenser fins(4). The condenser fins are **SHARP** and can be easily damaged.

Removing the grille.

1. Disconnect power to the unit.
2. Remove control knob (6) if equipped.
3. Loosen the two screws (1). Some models may have only one screw in the center.
4. Remove grille (2) and grille cap (if equipped)(3) from unit.

Installing the grille:

1. For 15 and 29 models make sure grille cap (3) is behind grille in slots provided in grille before attaching grille to unit.
2. For 75 models place the hook-hinge located on the rear bottom side of the grille (2) onto the front lip of the unit base. Swing the grille up into position.
3. Align cabinet and grill holes and secure, but do not overtighten grille screws (1).
4. Install control knob (6) if equipped.
5. Reconnect power to the unit.

29 Models

Ice Maker Models

Removing and Installing Door Shelves

For models equipped with door shelves:

To remove the door shelf:

1. Grasp shelf in center, and lift until the shelf notches (1) clear the pins (2).
2. Carefully pull the shelf away from the door.

To install the door shelf:

1. Holding the shelf in the center, center the shelf in the door at the desired location, slightly above the pins (2).
2. Lower the shelf onto the pins (2).

Door Alignment and Adjustment

Align and adjust the door if it is not level, or is not sealing properly. If the door is not sealed the unit may not cool properly, or excessive frost may form in the interior.

IMPORTANT

Properly aligned, the door's gasket should be firmly in contact with the cabinet all the way around the door (no gaps). Carefully examine the door's gasket to assure that it is firmly in contact with the cabinet. Also make sure the door gasket is not pinched on the hinge side of the door.

To align and adjust the door:

1. Loosen (do not remove) top and bottom hinge screws.
2. Align door squarely with cabinet.
3. Make sure gasket is firmly in contact with cabinet all the way around the door (no gaps).
4. Tighten bottom hinge screws.
5. Tighten top hinge screws.

Door Reversability

Location of the unit may make it desirable to mount the door on the opposite side of the cabinet.

Models with black and white doors are field-reversible.

Stainless steel models with glass doors without locks are field-reversible.

Stainless steel models without glass doors must be ordered right- or left-hand hinged.

Reversing the door

The hinge hardware will be removed and reinstalled on the opposite side of the cabinet.

The hinge plate is flipped over when it is reinstalled on the opposite side of the cabinet.

To reverse the door:

Remove grille:

Remove the grille, see MAINTENANCE section of this guide.

Remove top hinge, and door:

1. Hold door to keep it from falling.
2. Remove top hinge from cabinet by removing three or four screws, depending on model.
3. Remove door by tilting forward and lifting door off bottom hinge.
4. Remove three or four plastic screw plugs from hinge holes on the opposite side. Reinstall into holes where the hinge was removed. Ensure not to scratch cabinet.

Remove bottom hinge:

1. Remove bottom hinge from cabinet. Some models will have a gusset with two screws. Other models will have a plate with three screws.
2. Remove corresponding screws on opposite side of cabinet. On some models there may be a nut behind one or both screws on either side.

Install bottom hinge:

1. If you have a plate hinge, reorient the pivot screw so it protrudes the opposite direction from the hinge. Remove the pivot screw from the hinge. Turn the plate over and reinstall the screw.
2. Align hinge outer edge with cabinet. For models with a plate hinge, the flat edge of the hinge aligns with the outer edge of the cabinet.

Install two or three screws, depending on model. Replace nuts if used.

Prepare door for reinstallation:

For stainless steel models with glass doors:

3. Stainless glass doors are flipped upside down to be reversed.
4. Lay the door on its side. Remove the plastic hole plug (1) and install in the corner opposite of where it was removed.
5. Remove the plastic hinge bushing (2) and install in the corner opposite of where it was removed.
6. Remove the U-Line nameplate (3) from door. This will reveal mounting holes for the door actuator bracket.
7. Remove door actuator (4) from door. Be sure to only remove the two screws holding the actuator to the door. Reinstall the actuator (4) on the opposite end of the door where the nameplate was removed.
8. Install new nameplate where the actuator assembly was removed.
9. Install screws into holes on opposite side, where the hinge was removed. Replace nuts if used.

Prepare door for reinstallation:

For black or white doors:

1. Remove plastic hole plug from top of door handle and reinstall on opposite side.
2. Remove plastic hinge bushing on bottom of door and reinstall on opposite side. Clean out bushing hole in door bottom with a screwdriver if necessary.

Install top hinge, and door:

1. Reorient the pivot screw so it protrudes the opposite direction from the hinge. Remove the pivot screw from the hinge. Turn the plate over and reinstall the screw.
2. Hold door to keep it from falling.
3. Lift the door on to the bottom hinge.
4. Align flat edge of the hinge with the outer edge of the unit.
5. Install three or four screws, depending on model.

Align and adjust the door:

1. Align and adjust the door, see DOOR ALIGNMENT AND ADJUSTMENT.

Install grille:

Install the grille, see MAINTENANCE section of this guide.

6 Doors (Self Closing)

Door Alignment and Adjustment

Align and adjust the door if it is not level, or is not sealing properly. If the door is not sealed the unit may not cool properly, or excessive frost may form in the interior.

IMPORTANT

- Properly aligned, the door's gasket should be firmly in contact with the cabinet all the way around the door (no gaps). Carefully examine the door's gasket to ensure that it is firmly in contact with the cabinet. Also make sure the door gasket is not pinched on the hinge side of the door.
- The door will not be flush with the top of the cabinet. The top edge of the door will be 1/8 in. (3.175 mm) below the cabinet top.

To align and adjust the door:

1. Compare the top edge of the door (opposite the hinges) to the top edge of the cabinet and note the type (up or down) of adjustment needed.

2. Remove the top hinge pivot pin with a Phillips screwdriver and lift door off bottom hinge pin. Be careful not to lose the door closer insert sets.
3. Turn the door upside down and inspect the hinge plate mounting holes. The plate has slotted mounting holes. Loosen but do not remove the two hinge plate screws(1).
4. If door edge opposite the hinges needs to move up, move plate toward outside of door(2). If door edge needs to move down, move plate toward inside of door(3). Repeat until top edge of

door is parallel with top of cabinet and tighten screws (1) securely.

5. After adjustment is complete, remove the door closers from the bottom hinge, clean thoroughly and apply petroleum jelly to the mating surfaces of the closers. Be sure that pins on closers align with holes in the door and bottom cabinet hinge plates. Mount door and install top hinge pivot pin.

Door Reversability

Location of the unit may make it desirable to mount the door on the opposite side of the cabinet. Many doors are reversible. See table below.

Reversing Black or White Doors

- The Hinge hardware will be removed and reinstalled on the opposite side of the cabinet.
- The top hinge hardware will be reinstalled on the bottom of the opposite side of the cabinet.
- The bottom hinge hardware will be reinstalled on the top of the opposite side of the cabinet.

Remove Door

1. Hold door to keep it from falling.
2. Remove hinge screw pin (1) from top hinge using a Phillips screwdriver.
3. Remove door by tilting forward and lifting door off bottom hinge closer inserts.
4. Reinstall hinge screw pin (1) into top hinge using a Phillips screwdriver.

Remove hole plugs.

Remove plastic screw plugs (three each, top and bottom) (3) from new hinge location. Save for reinstallation later.

Remove existing top hinge.

Remove existing top hinge (three screws) (2).

Reinstall hinge to bottom opposite.

1. Install the hinge just removed from the top to the BOTTOM opposite side of the cabinet (three screws) (2).
2. Remove the two door closer inserts (4) from the existing bottom hinge.
3. Install door closer inserts as shown on the new bottom hinge (4).

Remove preexisting bottom hinge.

1. Remove the preexisting bottom hinge (three screws) (2).

Reinstall hinge to top opposite.

1. Install the hinge just removed from the bottom to the TOP opposite side of the cabinet (three screws) (2).

Reinstall Hole Plugs.

1. Install plastic screw plugs (three each, top and bottom) (3) into holes where hinge hardware was removed.

Prepare door for reinstallation.

1. Remove plastic hole plug from top of door handle and reinstall on opposite side.
2. With bottom of door facing up, remove pivot plate (5) (two screws).
3. Flip over and install pivot plate on opposite side of door. Ensure notch in plate faces center.

Install Door.

1. Hold door upright and tilted forward.
2. Lift door on to bottom hinge closer inserts.
3. Tilt door forward into position.
4. Hold door to keep it from falling.
5. Reinstall hinge screw pin (1) into top hinge using a Phillips screwdriver.

Align and adjust the door:

Align and adjust the door, see DOOR ALIGNMENT AND ADJUSTMENT on page 10.

Reversing Stainless Steel Glass Doors

Remove Door

1. Hold door to keep it from falling.
2. Remove hinge screw pin (1) from top hinge using a Phillips screwdriver.
3. Remove door by tilting forward and lifting door off bottom hinge closer inserts.
4. Reinstall hinge screw pin (1) into top hinge using a Phillips screwdriver.

Remove hole plugs.

1. Remove plastic screw plugs from (three each, top and bottom) (3) from new hinge location. Save for reinstallation later.

Remove Stainless Frame

1. Remove two screws from top of door. Save screws for later installation.

Top Of Door

2. Remove pivot plate from bottom of door by removing 2 screws. Set pivot plate and screws aside for later installation.

Bottom Of Door

3. Grasp outer edge of stainless frame and firmly press inside edge of glass in while pulling stainless frame in opposite direction.

4. Unhinge frame from door.

Assemble Stainless Frame

1. Prop frame against solid surface, handle side down and away
2. Insert door, logo forward, into frame at a 30° angle. For a right hand hinge the logo should be to your right. For a left hand hinge the logo should be to your left.

Door Orientation Right Hand Hinge

Door Orientation Left Hand Hinge

3. Swing door into frame.
4. Install screws removed in "Remove Stainless Frame" step 1 to top of door, opposite handle.
5. Install pivot plate to bottom of door, opposite of handle, using hardware removed in "Remove Stainless Frame" step 2. Arrange pivot plate so the flat edge is against the edge of the door.

Orient Hinge

1. Remove existing top hinge (three screws) (2).

Reinstall hinge to bottom opposite.

1. Install the hinge just removed from the top to the BOTTOM opposite side of the cabinet (three screws) (2).
2. Remove the two door closer inserts (4) from the preexisting bottom hinge.

3. Install door closer inserts as shown on the new bottom hinge (4).

Remove existing bottom hinge.

1. Remove the existing bottom hinge (three screws) (2).

Reinstall hinge to top opposite.

1. Install the hinge just removed from the bottom to the TOP opposite side of the cabinet (three screws) (2).

Reinstall Hole Plugs.

1. Install plastic screw plugs (three each, top and bottom) (3) into holes where hinge hardware was removed.

Install Door.

1. Hold door upright and tilted forward.
2. Lift door on to bottom hinge closer inserts.
3. Tilt door forward into position.
4. Hold door to keep it from falling.
5. Reinstall hinge screw pin (1) into top hinge using a Phillips screwdriver.

Align and adjust the door:

Align and adjust the door, see DOOR ALIGNMENT AND ADJUSTMENT on page 10.

Exterior Cleaning

Vinyl Clad (Black or White) Models:

- Clean surfaces with a mild detergent and warm water solution. Do not use solvent-based or abrasive cleaners. Use a soft sponge and rinse with clean water. Wipe with a soft, clean towel to prevent water spotting.
- Clean any glass surfaces with a non-chlorine glass cleaner.

Stainless Models:

- Stainless door panels, handles and frames can discolor when exposed to chlorine gas, pool chemicals, saltwater or cleaners with bleach.
- Keep your stainless unit looking new by cleaning with a good quality all-in-one stainless steel cleaner polish monthly. For best results use Claire® Stainless Steel Polish and Cleaner, which can be purchased from U-Line Corporation (Part Number 173348). Comparable products are acceptable. Frequent cleaning will remove surface contamination that could lead to rust. Some installations may require cleaning weekly.
- **Do not clean with steel wool pads.**
- **Do not use stainless steel cleaners polishes on any glass surfaces.**
- Clean any glass surfaces with a non-chlorine glass cleaner.
- **Do not use cleaners not specifically intended for stainless steel on stainless surfaces (this includes glass, tile and counter cleaners).**
- If any surface discoloring or rusting appears, clean it quickly with Bon-Ami® or Barkeepers Friend Cleanser® and a nonabrasive cloth. Always clean towards the grain. Always finish with Claire Stainless Steel Polish and Cleaner or comparable product to prevent further problems.
- **Using abrasive pads such as Scotchbrite™ will cause the graining in the stainless to become blurred.**
- Rust not cleaned up promptly can penetrate the surface of the stainless steel and complete removal of the rust may not be possible.

Interior Cleaning

- **Disconnect power to the unit.**
- Clean the interior and all removed components using a mild nonabrasive detergent and warm water solution applied with a soft sponge or non-abrasive cloth.
- Rinse the interior using a soft sponge and clean water.
- **Do not use any solvent-based or abrasive cleaners.** These types of cleaners may transfer taste to the interior products and damage or discolor the interior.

Defrosting

Manual Defrost Models

Unit is a manual defrost model and will require occasional defrosting. When there is build-up of 1/4" or more of frost manually defrost the unit. Defrost every two months minimum.

- Ensure the door is closing and sealing properly.
- High ambient temperature and excessive humidity can also produce frost.

CAUTION

DO NOT use an ice pick or other sharp instrument to help speed up defrosting. These instruments can puncture the inner lining or damage the cooling unit. DO NOT use any type of heater to defrost. Using a heater to speed up defrosting can cause personal injury and damage to the inner lining.

To defrost:

1. **Disconnect power to the unit.**
2. For combo models remove all products from the interior.
3. Remove ice bucket and discard ice.
4. Place towel or other absorbent material on bottom of ice bin. For combo models also place in bottom of unit.
5. Fill the ice bucket half full with warm, not hot water. This will help the unit defrost faster.
6. Place the ice bucket back into the unit on top of the towel or other absorbent material.
7. Prop the door in an open position (2 in. (5 cm) minimum).
8. After about 1 hour remove the ice bin and discard water.
9. Allow the frost to melt naturally.
10. After the frost melts completely clean the interior and all removed components. (See INTERIOR CLEANING)

IMPORTANT

DO NOT clean ice bucket using a dishwasher. The bucket is not dishwasher safe and will be damaged.

11. When the interior is dry, reconnect power and turn unit on.

NOTE: To safeguard against contaminants in ice, discard first three batches of ice after defrosting.

Condensor Cleaning

Interval - Every Six Months

To maintain operational efficiency, keep the front grille free of dust and lint, and clean the condenser every three months. Depending on environmental conditions, more or less frequent cleaning may be necessary.

WARNING

Disconnect electric power to the unit before cleaning the condenser.

WARNING

DO NOT touch the condenser fins. The condenser fins are **SHARP** and can be easily damaged.

IMPORTANT

DO NOT use any type of cleaner on the condenser unit.

1. Remove the grill. (See MAINTENANCE)
2. Clean the condenser coil (4) using a soft brush with a “combing” action or vacuum cleaner. Do not touch the condenser coil.
3. Install the grill. (See MAINTENANCE)

Storage, Vacation and Moving

If not using the unit for an extended period, or otherwise stored, follow these steps completely:

WARNING

Electrical Shock Hazard. Disconnect power before servicing. Before operating, replace all panels. Failure to do so may result in death or electrical shock.

IMPORTANT

If the ambient temperature is expected to drop below 50°F, turn off and unplug unit, and drain all water from the unit to prevent freezing damage not covered by the warranty.

1. Remove all consumable contents from the unit.
2. Disconnect the power cord from its outlet, and leave it disconnected until the unit is returned to service.
3. Clean and dry the interior of the cabinet.
4. During periods of nonuse, the cabinet must remain open to prevent formation of mold and mildew. Open door a minimum of 2 in. (5 cm) to provide the necessary ventilation.

Product Disposal

If the unit is being removed from service for disposal, check and obey all Federal, State and or Local regulations regarding the disposal and recycling of refrigeration appliances, and follow these steps completely:

1. Remove all consumable contents from the unit.
2. Disconnect power to the unit and unplug the power cord from its outlet.

DANGER

RISK OF CHILD ENTRAPMENT. Before you throw away your old refrigerator or freezer, take off the doors and leave shelves in place so children may not easily climb inside.

3. Remove the cabinet door.

Before Calling for Service

If you think your U-Line product is malfunctioning, read the OPERATION section of this guide to clearly understand the function of the control.

If the problem persists, read the NORMAL OPERATING SOUNDS and TROUBLESHOOTING GUIDE section of this guide to help you quickly identify common problems, and possible causes and remedies. Most often, this will resolve the problem without the need to call for service.

If Service is Required

If you do not understand a troubleshooting remedy, or your product needs service, contact U-Line Corporation directly. Contact information appears on the rear cover of this guide.

When you call, you will need your product Model and Serial Numbers. This information can be recorded inside the front cover of this guide. It also appears on the Model and Serial number plate located on the upper right or rear wall of the interior of your product.

Replacement Parts

When you need replacement parts, always request genuine U-Line replacements. U-Line designs and engineers products using components that work efficiently, and provide superior service life and performance. The use of aftermarket parts or components may affect the safety, operation, performance or durability of your product, and may also void its warranty.

Normal Operating Sounds

All models incorporate rigid foam insulated cabinets to provide high thermal efficiency and maximum sound reduction for its internal working components. Despite this technology, your model may make sounds that are unfamiliar.

Normal operating sounds may be more noticeable because of the unit's environment. Hard surfaces such as cabinets, wood, vinyl or tiled floors and paneled walls have a tendency to reflect normal appliance operating noises.

Listed below are common refrigeration components with brief description of the normal operating sounds they make. NOTE: Your product may not contain all the components listed.

- **Compressor:** The compressor makes a hum or pulsing sound that may be heard when it operates.
- **Evaporator:** Refrigerant flowing through an evaporator may sound like boiling liquid.
- **Condenser Fan:** Air moving through a condenser may be heard.
- **Automatic Defrost Drain Pan:** Water may be heard dripping or running into the drain pan when the unit is in the defrost cycle.

Troubleshooting Guide

ELECTROCUTION HAZARD. *Never attempt to repair or perform maintenance on the unit until disconnecting the main electrical power.*

Troubleshooting - What to check when problems occur:

Problem	Possible Cause and Remedy
Interior Light Does Not Illuminate.	The light bulb may be defective. (See MAINTENANCE)
Light Remains on When Door is Closed.	Adjust light actuator bracket on bottom of door.
Unit Develops Frost on Internal Surfaces.	If unit is a manual defrost model it will require occasional defrosting. When there is build-up of 1/4" or more, manually defrost the unit. Ensure the door is closing and sealing properly. High ambient temperature and excessive humidity can also produce frost.
Unit Develops Condensation on External surfaces	The unit is exposed to excessive humidity, moisture will dissipate as humidity levels decrease.
Product is Freezing in Combo Models.	Adjust the temperature to a warmer set-point. (See OPERATION)
Product is Not Cold Enough in Combo models.	Air temperature does not indicate product temperature. See OPERATION - Checking Product Temperature. Adjust the temperate to a cooler set-point. (See OPERATION) Ensure unit is not located in excessive ambient temperatures or in direct sunlight. Ensure the door is closing and sealing properly. Ensure the interior light has not remained on too long. Ensure nothing is blocking the front grille, found at the bottom of the unit. Ensure the condenser coil is clean and free of any dirt or lint build-up.
Ice Cubes Sticking Together	During periods of limited use or high ambient temperatures, it is common for cubes to fuse together. Gently shake the bucket to break apart cubes.
No Ice Production	Ensure the bin arm is not in the up (off) position.
Not Enough Ice	Ensure the condenser coil is clean and free of any dirt or lint build-up.
Water in Bucket	Ensure cube size adjustment is not set too high.

BUILDING ON THREE GENERATIONS OF INNOVATION

For nearly five decades and three generations, U-Line continues to be the leader in innovation, quality and value in the premium built-in undercounter ice making, refrigeration and wine preservation market. U-Line has captivated those with an appreciation for the finer things with exceptional functionality, style, inspired innovation and attention to even the smallest details. We are known and respected for our unwavering dedication to product design, quality and selection.

In 1962, Henry Uihlein founded U-Line Corporation as an outgrowth of Ben-Hur Freezer Company and was the first to develop and patent an automatic stand-alone undercounter residential ice maker. His foresight and determination to develop new ideas and to succeed when there were no clear guidelines or solutions are evident today. The newest Uihlein generation continues to build upon the family's innovative legacy at the Milwaukee, Wisconsin based business by providing continuity and vision from which new designs and technology continue to be born.

Today the complete U-Line product collection includes Ice Makers, Wine Captain® Models, Combo® Models, a Refrigerator / Freezer, Refrigerators, Drawers and Beverage Centers. The U-Line brand offers products in the 1000 Series, 2000 Series and the Modular 3000 Series. The 1000 Series offers a more targeted priced product with appropriate features, while the 2000 Series offers upscale features, advanced technology and specialized product families. U-Line's approach to its breadth of products, multiple price points and features allows a choice and product that will fit any lifestyle.
